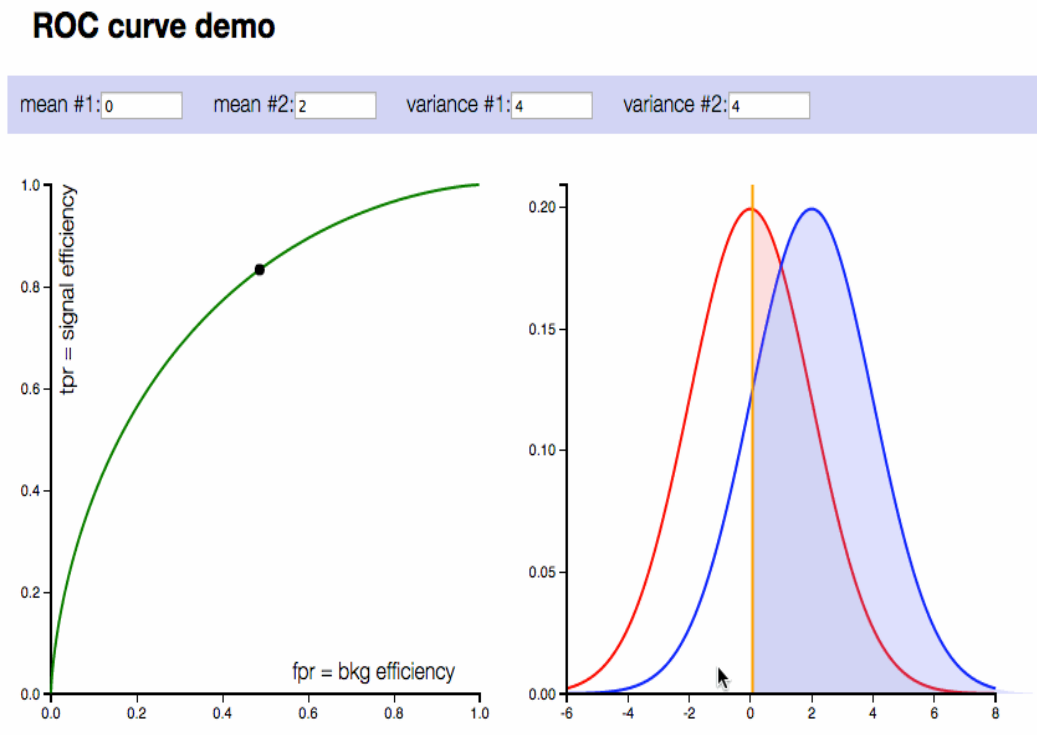
Conclusion

Conclusion

Selected Vectoriser:
TF-IDF

Selected Model:
Logistic Regression

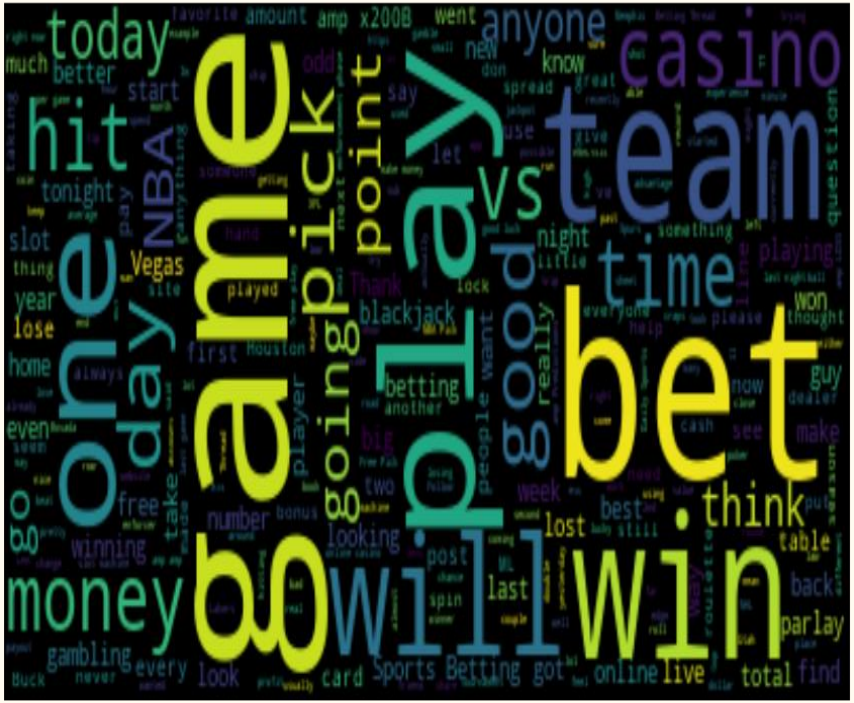


Conclusion

- **Extract the words** with higher coefficients for gambling and problem_gambling
- Words → Basis of investigation to develop recommendations for gambling addicts

Recommendations

Recommendations



Recommendations

Observation 1: Money has a larger presence in problem_gambling compared to gambling subreddit.

- Gambling leads to Financial Difficulties → Problem Gambling
- Gamblers are not solely driven by money, the thrill factor plays a major role → Appears lesser in gambling

Observation 2: Words of a shorter term like **today** have a higher representation in gambling over words of longer term like **month** and **year**

- Gamblers yearn for instant gratification
- Long term words → long term thoughts on recovery
- Identify and link up those who are rehabilitating

Recommendations

Observation 3: Emotional words like **feel** and **lost** are in the problem_gambling subreddit.

- The type of feelings can be studied to develop a more customised format of counselling to aid those in distress

Note:

- As always the optimal solution to better modelling is to get more data
  - Reddit != Local problems
  - Posts may not always be reliable
  - Use words from reddit to construct a detailed quiz for those facing gambling addiction locally

gambling
Fun or
Addiction?
